

## ABSTRACT

- 5 A method of transmitting information asynchronously between a supplier and a consumer in accordance with ACID properties, the supplier and the consumer being connected by a chain of communication channels. The method is characterized in that the information is transmitted by means of independent transactions set up:
- between the supplier and the first communication channel of the chain,
  - between each of the communication channels of the chain, and
  - between the last communication channel of the chain and the consumer.
